### **NAME**

CURLOPT\_DNS\_USE\_GLOBAL\_CACHE - enable/disable global DNS cache

### **SYNOPSIS**

#include <curl/curl.h>

CURLcode curl\_easy\_setopt(CURL \*handle, CURLOPT\_DNS\_USE\_GLOBAL\_CACHE, long enable);

### DESCRIPTION

Pass a long. If the *enable* value is 1, it tells curl to use a global DNS cache that will survive between easy handle creations and deletions. This is not thread-safe and this will use a global variable.

**WARNING:** this option is considered obsolete. Stop using it. Switch over to using the share interface instead! See *CURLOPT\_SHARE(3)* and *curl\_share\_init(3)*.

# **DEFAULT**

0

# **PROTOCOLS**

All

## **EXAMPLE**

**TODO** 

### **AVAILABILITY**

Subject for removal in the future. Do not use!

# **RETURN VALUE**

Returns CURLE\_OK if the option is supported, and CURLE\_UNKNOWN\_OPTION if not.
