NAME
>   CURLOPT_FILETIME – get the modification time of the remote resource

SYNOPSIS
>   #include <curl/curl.h>
>
>   CURLcode curl_easy_setopt(CURL *handle, CURLOPT_FILETIME, long gettime);

DESCRIPTION
>   Pass a long. If it is 1, libcurl will attempt to get the modification time of the remote document in this operation. This requires that the remote server sends the time or replies to a time querying command. The *curl_easy_getinfo(3)* function with the *CURLINFO_FILETIME* argument can be used after a transfer to extract the received time (if any).

DEFAULT
>   0

PROTOCOLS
>   HTTP, FTP, SFTP, FILE

EXAMPLE
>   TODO

AVAILABILITY
>   Always

RETURN VALUE
>   Returns CURLE_OK

SEE ALSO
>   **curl_easy_getinfo**(3),
